

Customer Intelligence & Insights for Communications

Digital Software & Solutions Group

Communications service providers (CSPs) contend with growing consumer expectations - the ability to share experiences in real-time via social media, customized products and services, and a unified experience across engagement channels. This entails significant investments in network infrastructure, even as revenues from traditional sources such as voice calls and landlines erode. With growing competition from non-traditional service providers and over-the-top players, and data service price wars, CSPs need to drive higher customer loyalty to sustain revenue.

Leveraging advanced analytics, TCS Customer Intelligence & Insights (CI&I) for Communications provides deep, cross-product insights into customers' usage patterns, service experience and expectations. CI&I for Communications analyzes across customer, network and operations data enabling CSPs to understand drivers of customer satisfaction, optimize and personalize service offerings, analyze product usage and network experience and improve targeting for product and service offerings.

Overview

In a market defined by increasing competition and high customer churn, CSPs must deliver an enhanced end-to-end customer experience. With customer purchase decisions increasingly influenced by online and social conversations, effectively engaging customers is key to enhancing loyalty. CSPs need to understand customers' specific needs and identify next best offers to convert cross sell and up sell opportunities. Additionally, success in the fiercely competitive communications industry mandates large network investments, necessitating improvement in operational efficiencies to reduce overhead.

CI&I for Communications addresses these challenges by assimilating multiple sources of data – including customer, product usage, network performance and more - to deliver analytics-driven insights into customer behavior. Our solution enables proactive customer lifecycle management, so you can influence customer engagement at every touch point.

Insights from analyses of network usage enable you to enhance the subscriber network experience, identify next best offers and drive more profitable product mixes and bundling. With predictive and prescriptive analytics on granular customer data, our solution identifies lead indicators for customer churn, enabling you to take remedial measures for customer retention. Furthermore, the solution identifies key customer personas and lets you build dynamic customer segments to improve targeting of campaigns.

Our Solution

CI&I for Communications is a fully integrated software analytics solution, based on a powerful platform that collects, filters, and analyzes customer information to generate comprehensive insights. The solution goes beyond predictive analytics to give you real-time, actionable recommendations.

TCS CI&I can help you:

Improve customer experience to drive loyalty and positive brand engagement

- Introduce powerful loyalty programs to retain valuable customers
- Provide call analytics to improve the customer care experience
- Identify causes of churn and retain customers with recommended remediation

Attract new customers

- Deliver customer 360 views, digital personas and dynamic customer segmentation to the business.
- Optimize behavioral segmentation, content propensity, pricing, bundling and unbundling to drive new business

Benefits

Comprehensive Analysis: Real-time analysis on unstructured and structured customer data from internal and external sources across multiple channels. Facilitates robust information management to collect, organize, cleanse, segment and analyze customer information.

Deep Customer Insights: Cross-product insights into customer usage and sentiment analysis for brand, services, care channels, and offers. Leverages customer 360° analytics, Voice of Customer analytics social insights and digital marketing to drive up-sell and cross-sell. Supports 'segmentation of one', creating micro-segments to target each customer uniquely with more relevant services.

Network Analytics: Analysis of network usage data to personalize offerings and introduce relevant ones. Modules for network fault prediction and real-time network analysis to proactively identify problems.

The TCS Advantage

TCS CI&I Solution for Communications was developed specifically for CSPs. Only TCS offers:

Industry solutions: Our software has been created by industry experts who continuously scan the horizon for impending changes. Our industry specific development approach adopts the latest technologies and wisdom from TCS' world class R&D.

Lower cost of ownership: Our revolutionary CI&I Communications Platform with data lake architecture includes pre-built uses cases for CSPs while enabling users to build and deploy additional use cases--all on a single data and analytics platform.

Simplified business and engagement models: We offer flexible business models that adapt to how you want to buy software. Our rapid implementations deliver value within 30 days. Published pricing helps avoid lengthy negotiations and our enterprise software is downloadable from the web.

World class innovation: Unencumbered with years of legacy code, we bring state of the art technology to our solutions that meet requirements such as real-time, prescriptive analytics, and open source.

Experience Certainty commitment: Our corporate culture is one of superior delivery and customer certainty. Our consulting clients know the quality of our work, and now, companies can get that same level of quality, speed and certainty with our already configured software and solutions.

How we help our customers

TCS works with many of the major communications service providers globally, leveraging industry expertise to solve major challenges faced by operators. A converged CSP in the Middle East wanted to monitor its entire brand offering portfolio at every point where its customers touched the business. TCS' solution provided analytics for over 70 Key Performance Indicators (KPIs) spanning network-related, branding and experience score indicators. Armed with this data, the client is now empowered to improve customer experience, customer satisfaction and loyalty, and financial impact.

A major provider in the UK needed a 360° of the customer across markets, product lines, channels and customers. TCS implemented a solution to capture and analyze data from a variety of sources, including customer information, usage, products, billing, orders, payments, interactions, services requests, campaigns, and more. The result - improved insight into and across contact centers with optimized call flow and lower transfer rates. The solution facilitated trend analysis and forecasting as well as channel and churn analysis that has helped increase customer satisfaction and retention.

Maximize customer lifetime value

- Increase wallet share through household value analysis, content bundle propensity, and customer-centric pricing strategies
- Increase cross-sell and up-sell effectiveness through event triggered offers and real time campaigns

Lower operational costs

- Unify all your data and analytics initiatives on a single platform.
- Streamline data management by eliminating data silos
- Optimize ad spend by driving more targeted campaigns
